Keymacro is a tool that allows you to easily add up to 20 keys to your Windows key macros. Features: It works on all versions of Windows. More than 20 customizable key combinations. Speed and efficiency. Use any language you want. Support for any key combination you wish. Keep the order of the keys. Automatic key tracking. It is a system that automatically disables itself when there are no key macros to run. You can restart it whenever you want. It is easy to get to know. The tool creates a keymacro.ini file to keep all your key combinations on one place. Installation: You can download Keymacro by the below link. Screenshots: VirusTotal detected no threats against this software. FileMind is a clear-cut and attractive file manager that focuses on speed when it comes to performing common file operations, such as copying or moving them to other locations on the disk. The software application comes bundled with a few intuitive options that should be easy enough for inexperienced users to figure out. Setting up FileMind is a swift procedure that doesn't demand too much attention, thanks to the fact that it integrates familiar options. As for the interface, the app is wrapped in a modern-looking window with a neatly organized structure where, just like in Windows Explorer, you can seamlessly navigate disk directories to find, examine and control files. Speaking of Explorer, the context menu of FileMind is identical to the one of the default file manager. Create shortcuts for files and folders, and quickly locate items In addition, you can drag files and folders on an upper bar to create shortcuts to them, jump to any drive by clicking on its letter, as well as conduct search operations and narrow down results by specifying filters regarding time (e.g. today, week, month, earlier), file type (e.g. document, folder, link, picture) and extension. Evaluation and conclusion The program didn't put a strain on the overall performance of the machine throughout our tests, thanks to the fact that it required low CPU and memory to function normally. It had a good response time to commands, carried out search operations swiftly, and remained light on the system resources the entire time. On the other hand, FileMind is currently in beta development stage, so it's a work in progress.

This is a desktop application for calculating and plotting trend lines, support and resistance levels as well as forex pivot points. It can be used to forecast the direction of the market. Supports both stocks and forex. It is also a good tool for trend analysis.

KeyMACRO Features: KeyMACRO features a number of ways to calculate and plot support and resistance levels as well as forex pivot points. It is a desktop application and can be used to forecast the direction of the market. You can use it to trend analysis and it also has a full set of different indicators to be plotted on the chart. KeyMACRO uses a very intuitive user interface to let you define all your rules in order to plot your pivot points, trend lines and levels. You can define your own pivot points, levels, support and resistance levels for both stocks and forex. You can also define your own functions to get the support and resistance levels and the pivot point. KeyMACRO can be used by individual or professional traders. The charts that you can plot can be plotted in either a linear or a logarithmic scale. If you don't like the scale of the chart, you can use the plotXYZ function to plot your own custom range in whatever scale you like. KeyMACRO calculates the pivot points by hand if you have specified enough lines and columns to calculate all of the pivot points that you want to plot. You can also plot the pivot points on your chart using the PlotPivotPoints function. You can also plot the pivot points on the chart if you have specified the location of your pivot points with
