KeyMacro is a powerful yet easy-to-use macro recorder tool. It is feature-rich and comes with

a number of different key combination settings to choose from. After you are done recording the key combinations, you can load them into any application as keyboard shortcuts. KeyMacro is a feature rich macro recorder that enables you to record any sequence of keyboard presses and then load them to any program. KeyMacro comes with preset keyboard combinations to do basic tasks like launching your web

browser, launching your email application, launching your calendar, and more. As well as recording keyboard presses, you can also record mouse movements, mouse clicks, and clicks on the keyboard. Nowadays almost every computer user wishes to learn shortcuts in their desktop applications like MS Word, MS Excel and Powerpoint. Every computer user must learn shortcuts as it is a convenient

way to perform tasks. Shortcuts can be mapped to any keyboard or mouse button. If you are comfortable with keyboard shortcuts then you can use KeyMacro to save a large number of keyboard shortcuts with a click of the button. This would save your time and frustration. KeyMacro also supports Multi-Tab functionality. It opens more than one program at the same time. The user can navigate from one

window to another window of the programs at the same time. This could be useful if you want to launch two or more programs at the same time, for example a program of your choice and your favorite application. KeyMacro can record data entered into the text boxes of a website like an address bar or a form. You can also capture data from web pages, like URL or form. With KeyMacro's data capture, you can record multiple

pages at a time and use multiple web browsers at the same time. This is so helpful when you have to share your macros with others who are working on the same task. In addition to the recorded key combinations, you can also add notes and customizations to each recorded macro. You can include images to the recorded macros and you can share the recorded macros with your friends and family. If you are working in an office

environment, you can share recorded macros with your colleagues. KeyMacro allows you to record macros that can be used in Windows, Mac, Linux, and Windows CE. This tool has been tested in Windows 98, 2000, XP, Vista, 7, 8, 10, Windows 7 and Windows CE 6.0. You can access your recorded macros from anywhere with the help of its intuitive interface. 1d6a3396d6

KEYMACRO keystrokes macros for Windows and Mac OS X. It lets you store keyboard shortcuts, mouse clicks, text shortcuts and many other elements of the system configuration as a database. You can easily program them from the database window, which shows the structure of the record: each shortcut is on a separate line, it has one text and

one link on mouse clicks. The text is the shortcut key, the link indicates the action to be performed when clicking the shortcut key. All shortcuts and their actions can be edited and saved, so you can easily modify any shortcut. You can also edit the database file directly, then reload it. The program is fully compatible with Windows and Mac OS X. KEYMACRO is released under the GNU GPL, and it is available for both Mac

OS X and Windows. MacX Calendar MacX Calendar is a calendar application that uses the same interface and design language as Calendar.com, the online calendar created by Apple. The application has been designed with a focus on simplicity, allowing you to create, edit, and add events quickly and easily. Each event is listed in a day view or week view format, providing you with access to all types of

appointments, from the reminder of a birthday party to a business meeting. The interface provides easy access to your contacts, birthday and anniversary reminders, as well as event invitations. You can edit any type of event and add personal information, photos, and a detailed description. The MacX Calendar is compatible with the Mac operating system, but it can also be used on Windows. It is released under

the GNU GPL, and it is available for both Windows and Mac. Teamboard Teamboard is a tool for organizing the development team. It lets you set team goals, set tasks and manage projects. All team members can create their own projects. You can assign tasks to team members, provide a task description, and set the deadline. You can set due dates for other members of your team, and all team members can see these

tasks at any time. Teamboard is released under the GNU GPL, and it is available for both Windows and Mac. Teamboard allows you to use both their Windows and Mac editions. The Teamboard for Windows and Mac are not only for the Mac, but also in Windows. There are several time tracking applications available for Mac OS X. Yet few of them incorporate features and options that cater to developers and

software engineers. Super Productivity is one of them. An open-
