Routine intraoperative colonic irrigation for laparoscopic colorectal surgery: a systematic review and meta-analysis of literature. Intraoperative colonic irrigation (ICI) is a commonly utilized technique used during laparoscopic colorectal surgery (LCRS) to prevent anastomotic leak. The purpose of this systematic review was to evaluate ICI in LCRS, focusing on its safety and efficacy. A systematic review was performed according to the Preferred Reporting Items for Systematic Reviews and Meta-Analysis (PRISMA) guidelines. PubMed, Scopus, and Cochrane Library were searched using MESH terms and keywords related to the topic. Publications addressing the safety and efficacy of ICI were selected based on the inclusion and exclusion criteria. Quality assessment and data extraction were completed independently by 2 investigators. A random-effects model was applied for pooled analysis. A total of 993 publications were identified, of which 48 were included in the review. Pooled analysis of the included studies revealed that ICI does not appear to significantly increase the risk of anastomotic

leak (2.1% vs. 1.4%, OR 1.4, 95% CI 0.7-2.8, p = 0.4). However, ICI significantly decreased the risk of anastomotic leak in patients with a diverting loop col
